

INTRODUCING SUPER MIGRATION PLUS.

Classic Software and Services is proud to offer the industry's most comprehensive data management system allowing clients to move a billion or more images from one archive to another, quickly and accurately.

SUPER MIGRATION PLUS.

This turnkey service combines our hardware, software and expertise to move any number of checks and images from one archive to another. In our first implementation we are moving 1,000,000,000 (1 billion) check images.

We map a hundred or more data elements from the one archive into the other with a unique methodology that gives our customer's team a clear understanding of what the disposition of every data element is before we get started. Once the customer approves the data mapping, the software tools are then customized and tuned for their specific environment, providing very high performance (1,000's of items per second). Additionally the software tools are scalable to almost any volume of items, using standard divide and conquer techniques achieving the very high performance needed to migrate a billion items in a few weeks.

Our methodology can remove the need to purchase the temporary high bandwidth communications infrastructure that is typically called for. By loading the data onto a set of secure servers and physically transporting them from one site to another we can move huge (24 TB or more) amounts of data across the country in a few hours.

All files are **secure**. When they are readied for transport they are encrypted using symmetric block encryption algorithms with 8192 bit keys, far greater than industry standard 256 bit encryption.

All files are **safe**. Using RAID 6 technology, and performing dual writes to multiple arrays of RAID 6 the chance of data loss is extremely remote.

Using this service to consolidate archive systems can save significant money by:

- Reducing the cost of training new personnel, train them on one system, instead of several,
- Simplifying back office operations, one system to monitor, and support by your IT staff,
- Eliminating little used archives, or one-off systems and lowering the costs associated with the maintenance of those systems.
- Supporting conversions for all Item Processing applications such as POD, Inclearing, lock box, returns, exceptions etc.
- Preparing for the continuation of payments migration into a single transaction system for ACH, ARC, debit, and credit transactions.
- Helping the customer with mergers and acquisitions.

SUPER MIGRATION PLUS is just one example of how Classic Software and Services can contribute to the efficient operation of your organization. Whether it's Consulting Services, Contract Computer Programming or other customized services, we stand ready to provide the knowledge and expertise to help you stay ahead of the competition.
