

We are Classic Software and Services. We combine state-of-the art technologies with decades of experience to bring your organization the software solutions necessary to stay at the leading edge. And, we deliver with the caliber of service and support that is expected from a leader.

## CLASSIC TIFF PURIFIER

- Production Proven at Two Large Financial Institutions, processing millions of items per day
- The solution for your non-conforming image (NCI) problem.
- Purifies TIFF images, in Image Cash Letters, to the ANSI X9.100-181 specification.
- Provides Integrity to the data stream by eliminating TIFF variances that cause NCI's and the risk of a returned item due to a non-conforming image.
- Runs as a lights out, Windows Service with low overhead.
- Unmatched Performance, analyzing well over 1000 images (500 items) per second
- Quickly passes thru ICL files that have no variances unaltered.
- Provides daily reports, as an excel spreadsheet, on items with variances and what action was taken to purify the images.
- Using the Reports you can send the information to a billing system to charge the client for the variances and generate fee revenue.
- The Solution to TIFF variances coming in from Branch, or Corporate capture. Creates a standard TIFF wrapper for all inbound items.
- Does not alter the original unencoded image. Only modifies the images TIFF and encoding scheme to be compliant with ANSI X9.100-181
- Landing Zone Support for X9 files inbound from partner banks, branch or corporate capture.
- IBM Payments Director (IPD) Support by way of the IPD Gateway IQA User Exit which allows the image to be corrected prior to being saved in the IPD Transaction Server.
- **New!** In 3.0 (available March, 2011 ) – Integrated Image Quality Analysis (IQA) support while items are being purified. Currently supports the IBM IQA or Orbograph OrboCAR IQA.

Whether it's Consulting Services, Contract Computer Programming or other customized services, Classic Software and Services stands ready to provide the knowledge and expertise to stay ahead of the competition. We welcome the opportunity to explore the opportunities.
